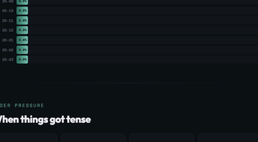
HOW CLAUDE ADAPTED

Response length over time

Median response length by month:

How often Claude apologized



UNDER PRESSURE

When things got tense

28	105	64%	2
FRUSTRATION SIGNALS	POSITIVE MOMENTS	RECOVERY RATE	MSGS TO RECOVER

0	0%
ALL-CAPS MESSAGES	DYSPHANTIC AGREEMENT

Claude writes +11.5% more after being criticized. 16 of 25 frustrated conversations eventually recovered.

Friction rate over time

Heated moments

API RATE LIMITING IMPLEMENTATION

why your code always has bugs in the edge cases

Here's a solution that handles the edge cases you mentioned. The key change is adding null checks before the iteration loop....

API RATE LIMITING IMPLEMENTATION

that's terrible, redo the whole thing

Here's the updated implementation with proper error handling, retry logic, and logging. Here's the updated implementation with proper error handling, retry logic, and logging. Here's ...

POSTGRESQL QUERY OPTIMIZATION

that's terrible, redo the whole thing

Here's a solution that handles the edge cases you mentioned. The key change is adding null checks before the iteration loop. Here's a solution that handles the edge cases you mentio...

PROJECT PROPOSAL WRITING

this is so bad, the layout is completely off

Connection pooling maintains a set of reusable database connections. Instead of opening a new connection for each request, the pool lends out existing ones and recycles them when d...

When you said "start over"

FRONTEND ACCESSIBILITY AUDIT

scrap the whole thing, I want to rebuild it using a different framework

Looking at your schema, I'd suggest normalizing the user preferences into a separate table. This gives you better query performance and avoids the JSO...

AWS LAMBDA COLD START FIXES

forget everything, let's start from scratch with a simpler approach

Here's a solution that handles the edge cases you mentioned. The key change is adding null checks before the iteration loop. Here's a solution that hap...

ABOUT YOU

What the data says

The marathon

Your longest conversation was 59 messages about "AWS Lambda cold start fixes" (2026-02-14). That is not a chat. That is a working session.

You open conversations like browser tabs

41 of 180 conversations (22%) had 2 or fewer messages. You test ideas fast and abandon them faster.

You think out loud

43 messages had speech transcription patterns. You switch to voice when typing is too slow.

The permission to destroy

You told Claude to start over 5 times. "Start from 0," "scrap it," "rebuild." Claude does not cling to its previous work when you tell it to burn it down.

9-day streak

Your longest run of consecutive daily usage. That is a sprint.

Night owl

30% of your conversations happen between 10 PM and 6 AM.

3.8:1 positive to negative

For every frustrated moment, you had 3.8 positive ones. Demanding but not unhappy.
